

Who is Mountaintop Studios?

Mountaintop Studios launched Spectre Divide as one of the most highly anticipated games of 2024. Their independent team, in partnership with former pro-gamer shroud, built a tactical shooter with a duality mechanic under the tagline “One mind; two bodies.”

Nate Mitchell

Founder & CEO
Mountaintop Studios

“Hathora continues to be the bedrock of Spectre Divide’s server orchestration and hosting. From development through launch, the platform enabled us to deliver an outstanding experience for players. We’ve closely collaborated on the roadmap, and they’ve quickly implemented a number of features that help us run Spectre every day. We’re thrilled to continue building on our partnership and integration with Hathora.”

PLAYER EXPERIENCE

Enabling Rapid Expansion

Initially Spectre Divide launched in eight regions but they noticed rapid demand in new markets. Hathora enabled a seamless expansion to five additional regions—Dubai, Frankfurt, Johannesburg, São Paulo, and Seattle—allowing the game to tap into the other markets.”

COST SAVINGS

Hybrid Servers

As a lean team running a game with AAA ambitions, Mountaintop leaned on Hathora’s expertise to provide them with hybrid capacity for launch day. This unlocked bare metal baseline pricing with cloud for burst capacity. This flexibility allows Mountaintop to adjust their spend to continue to improve the game and give the game a higher likelihood of achieving breakout success.

DEVELOPER EXPERIENCE

DDoS Protection

Hathora anticipated significant DDoS attacks early on and worked closely with Mountaintop Studios to set up mitigation strategies. In the first month, Hathora successfully defended against aggressive attacks, including one peaking at 20 million packets per second.

David Talley

Networking & Platform Lead
Mountaintop Studios

“We’ve been running games on Hathora for over a year, building confidence in the platform throughout our internal playtests, closed Alphas, and public Beta ahead of launch. The Hathora team have been great partners, incorporating lots of our feedback to improve their platform. During launch, Hathora was a stable part of our stack. Their global presence ensures low latency and security for Spectre players all over the world.”
